# About Our P

## Eco-friendly. Economical. Easy to Use.

The Green Filter® is a revolutionary new type of drinking water filter – simple to install, easy on the budget and especially friendly to the environment. Developed by Oasis International, a global leader in the design, manufacture and distribution of clean drinking water systems, the Green Filter offers deliciously clean water without the waste and cost of typical filtration systems. Simply re-use the outer filter housing and replace the biodegradable interior filter media – it's no wonder the Green Filter is fast becoming the "clear" choice for drinking water filtration.

## Clean, Safe, Delicious Drinking Water — At Home or at the Office.

Although the EPA sets standards for safe drinking water, most water has been significantly treated at a water treatment facility. Yet even with those standards in place, tap water can contain many elements that have nothing to do with H<sub>2</sub>O, including traces of lead, arsenic, radon, chlorine, fluoride, bacteria and parasites. Fortunately, there is something you can do to "tap" into clean, safe delicious water.

### Filtration as Usual

Water filtration removes impurities and contaminants that may enter the water supply during transport. It removes byproducts of disinfection that may add taste and odor, and provides an additional safeguard to ensure the best quality drinking water. However, typical plastic filters come at a very high price. Over 6 million plastic filters are disposed of each year, creating in excess of 1.1 thousand tons of non-biodegradable plastic waste; with 1.2 million kilowatts of energy expended to produce new plastic filters. The cost to the consumer is equally daunting, as they must be replaced every few months.

### Filtration Perfected!

The Green Filter offers an affordable, environmentally sound alternative. Compared to other filtration products, the outer housing is reusable and stays intact, with only the inside biodegradable filter media changed as needed. The consumer saves a significant amount of money and minimizes the impact on the environment. But these are no ordinary filter media. Select the filter media best suited for your needs, and in cases where more advanced filtration is desired, combine as many as two filter media for superior filtration and water quality.

## Green Filter® Systems

Wherever space is at a premium, the Green Filter® system can be installed with little more than a push and click.

**EZ-Turn** *Ideal for replacing your existing filter applications, the EZ-Turn allows you to simultaneously connect up to 2 customized filters of your choice for superior water quality and taste.*

The EZ-Turn system is a turn for the better – literally. The EZ-Turn system is secured with a simple push-into-place of the tubes at the water entry and exit valves located at the top of the filter – eliminating the extra labor needed in securing the tubes with clamps. Ideal for replacing your existing filter applications, the EZ-Turn allows you to simultaneously connect up to two customized filters of your choice for superior water quality and taste. Simply disconnect your old product, and hook up your EZ-Turn system! Compatible with almost all water appliances including under sink filtration systems, coffee machines, refrigerators, drinking fountains, and POU water coolers.

**InLine EZ-Clip** *Ideal in situations where simplicity and space are a priority, the InLine EZ-Clip delivers good, reliable and clean water.*

Tap water in. Filtered water out. The EZ-Clip system is as easy as it sounds. It is connected to flexible water tubing with a simple push-into-place fitting at the top and bottom of the filter – eliminating the extra labor needed in securing the tubes with clamps. The filter body is then secured to the wall by pushing it in to the EZ-Clip bracket. Ideal in situations where simplicity and space is a priority, the InLine EZ-Clip system delivers tasty, reliable and clean water when you need it. Compatible with almost all water appliances including: coffee machines, refrigerators, drinking fountains, POU water coolers and under-sink filtration systems.

## Green Filter® Systems *continued*

There exists another option wherever space is at a premium, the Green Filter® UnderSink system.

**UnderSink** *The UnderSink set delivers all the benefits of clean, healthy and good tasting water at an unbeatable value compared to other filtration and bottled water products. Includes up to two EZ-Turn filters, your choice of filter media and faucets, all necessary plumbing and an optional water cooler.*

Fresh water on demand has never been easier, whether for drinking, ice cubes or cooking. The UnderSink system delivers all the benefits of clean, healthy and good tasting water at an unbeatable value compared to other filtration and bottled water products. Simple to install, cost-effective to maintain and eco-friendly, the UnderSink utilizes reusable filter housings with biodegradable filter media to eliminate environmentally harmful waste while also offering a price advantage and nice looking addition to your kitchen.

## From Sink to Fountain, a Choice of Filtration Levels

Green Filter Media – a choice of five filter media allows for customization with the best filtration:

**Carbon** made from coconut shell charcoal; removes Chlorine, Taste & Odor (CTO).

**Carbon/phosphate** removes CTO and scaling, ideal for maintaining good condition of your water appliances.

**Carbon/lead** removes CTO and lead, good addition for use in buildings with older plumbing systems.

**Carbon/lead/phosphate** removes CTO, lead and scaling ideal for broad filtration and maintaining good condition of your water appliances.

**Spun-bonded polypropylene** removes sediments and improves the texture, tastes and clarity of your water.
