

# OASIS AQUILA

## Mains-Fed Water Cooler

OASIS Aquila is the next generation of mains-fed water coolers. This fully contactless unit is the trifecta: Designed for performance, maintenance and aesthetics, the OASIS Aquila has it all.

With a contactless activation, hydrating is a safer experience than ever! The user interface is intuitive and responsive. OASIS Aquila's tall dispense height means you can easily fill that large sports bottle!

Designed for effortless servicing and sanitisation, the front door panel allows for easy access to filters.

OASIS Pressure Vessel Direct Chill Point technology provides a consistent delivery of chilled water; as the water enters the system, it passes into a pressure vessel and is chilled as it moves through to the point of dispense.

The unit's exterior is made of ABS plastic and matt black powder coated steel side panels. The interface has a contrasting high gloss finish - this gives the OASIS Aquila a timeless, elegant appearance

### FEATURES

- Contactless, infrared sensor activation
- User friendly interface
- LED back-lit buttons
- Large alcove for refilling sports bottles & carafes
- Single dispense point
- Front door panel allows for easy access to filters
- Pressure Vessel Direct Chill technology
- Two-step Safety operation for hot water

### WATER OPTIONS

- Hot + Cold
- Ambient + Cold

#### *Carbo options:*

- Ambient, Cold + CO<sub>2</sub>
- Hot, Cold + CO<sub>2</sub>

### **CONTACTLESS**

Follow the LED display to activate water - without pressing a thing! Intuitive and effective in the prevention of cross-contamination.

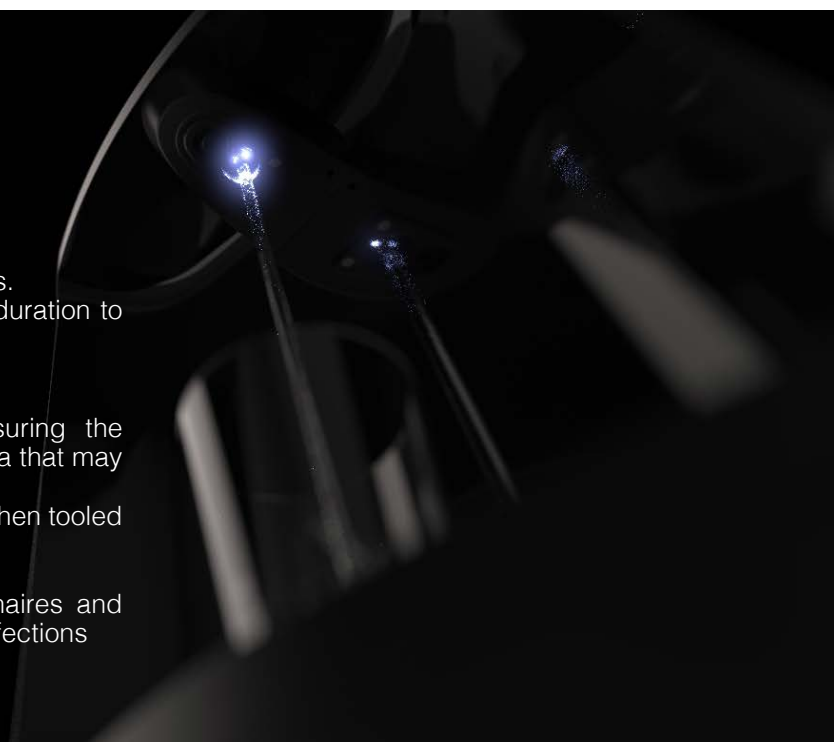

## QUASAR

- UVC LED at point of dispense.
- Killing 99.99% of pathogens instantly as water flows.
- UVC-LEDs pulse on every 10 minutes for a short duration to keep the dispense point sanitized.

Quasar is installed at the point of dispense, ensuring the disinfection of potential pathogens and harmful bacteria that may be harboured at the spout.

Worry no more about the quality of water (particularly when tooled with Green Filter)

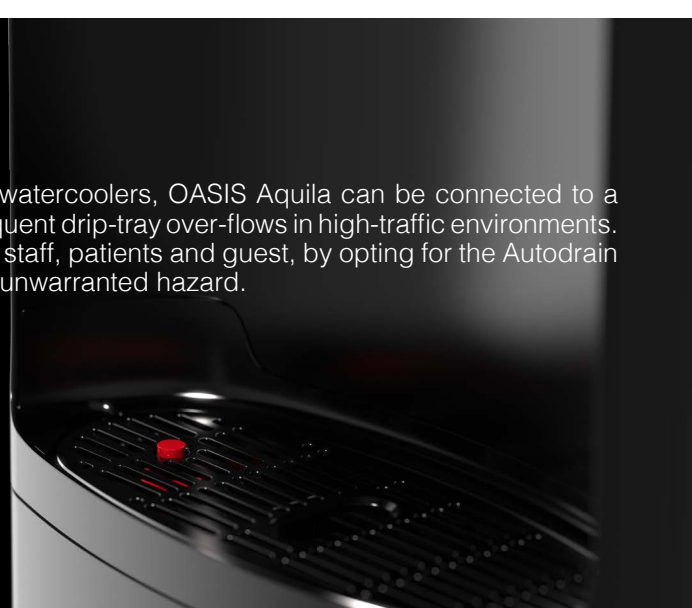

Choose a unit with QUASAR to instantly kill Legionnaires and microorganisms responsible for Hospital Associated Infections

### **PREVENT ACCIDENTS**

No Spills, No Slipping!

Unlike like conventional watercoolers, OASIS Aquila can be connected to a waste bottle, to avoid frequent drip-tray over-flows in high-traffic environments. Ensure the safety of your staff, patients and guest, by opting for the Autodrain option and avoiding this unwarranted hazard.
