OASIS DRINKING FOUNTAIN FINISHES: SIP IN STYLE!

MATCH ANY AESTHETIC

Welcome a splash of personality to your spaces. Whether in schools, offices, gyms, or public areas, OASIS drinking fountains are designed to quench your thirst and match your aesthetic needs. These fountains are not just about looks; they're built to perform!

OASIS provides variety when choosing the finish of your water fountain. Greystone, Sandstone, and Stainless Steel options let you choose which will be aesthetically pleasing for the space.

UPPER SHROUD AND PANEL CONSTRUCTION

At OASIS, we make our upper shroud from durable galvanized steel, which prevents cracking or breaking, giving you peace of mind that our products will last.

OASIS panels are made from galvanized steel and powder coated to prevent rusting and allow for easy cleaning.

POWDER COATING

Powder coating on galvanized steel gives our Versacooler® line significantly greater durability, which translates to lower life cycle cost. The coating, a mixture of finely ground particles of pigment and resin, is sprayed and bonded for complete coverage and strong adhesion. The finish resists cracking, corrosion, scratches, fading, impact and abrasion.

THE OASIS DIFFERENCE

- **Reliability:** With OASIS, you can trust in the quality and durability of our drinking fountains. They are designed to withstand heavy usage and deliver refreshing hydration for years.
- **Efficiency:** Stay hydrated without worries. OASIS drinking fountains ensure a continuous flow of water, promoting a sustainable solution.
- **Versatility:** OASIS drinking fountains suit various settings, including schools, businesses, recreational areas, and more!

Wherever you need a reliable water source, OASIS can elevate your hydration solutions.
